MicroStuffer PrinterBuffer

Frees Your Computer For More Productivity

When you finish inputting a job on your computer, it takes only a few moments to send the data to **MicroStuffer**. This Printer Buffer will receive print data at rates up to 8200 cps and then send it to your printer at the printers own print rate, freeing the computer for your next job.

With 64K of usable RAM, **MicroStuffer** has enough memory to hold approximately 45 pages of double spaced text or numerous pages of detailed graphics. And, it works with most Centronics Interface Compatible Computers and Printers.

Because **MicroStuffer** has it's own power supply, it will continue to hold data even if the computer or printer is turned off, or is off line. **MicroStuffer** has a built-in repeat function which allows you to print unlimited copies of the data in the buffer's 64K memory.
